

IMPORT DOCUMENT GUIDE FOR AI PRODUCT DISCOVERY

DUMMY TRAINING DOCUMENT - NOT LEGAL, TAX, OR CUSTOMS ADVICE - DO NOT USE FOR REAL IMPORT / EXPORT OPERATIONS

This guide explains what each document is, what information it normally contains, and what an AI product like TradeOps AI / Desteia-inspired system would extract and validate. All sample documents in this pack are fictitious.

Document	What it proves	Typical owner/user	Fields to extract	AI validation examples
Commercial Invoice	Commercial value and sale terms	Supplier, buyer, broker, finance	Seller, buyer, invoice number/date, PO, Incoterms	Invoice date vs PO; HS, origin, imported vs. Made in China
Packing List	How goods are packed physically	Warehouse, logistics, broker, customs	Containers, seals, packages, gross/net weight	Container vs Bill of Lading; origin vs invoice; origin vs invoice
Bill of Lading	Transport receipt/contract and carrier details	Shipper, forwarder, broker, logistics	Bill number, shipper, consignee, notify, port of origin	Container vs Bill of Lading; origin vs invoice; origin vs invoice
Pedimento	Mexican customs declaration	Customs broker, importer, customs	Regimen, aduana, clave, regimen, RVO	Regimen vs HS; origin vs invoice; origin vs invoice
MVE	Value declaration and supporting evidence	Importer, broker, compliance	Folio, importer, supplier, invoice, valuation	MVE total vs invoice total; supporting evidence;

Product insight: the user is not asking AI to replace a customs expert. The user wants AI to reduce repetitive review, highlight risky mismatches, keep evidence organized, and let a human approve the final handoff.
Best demo flow: upload docs -> classify documents -> extract fields -> compare documents -> show exception inbox -> explain risk in plain language -> ask for human approval -> export package.
